Module 2: Week2_AppIdea
Option 1

1. StudySmart AI – Your Personal Study Assistant

MindKoi — AI Study Companion by Margo Semenova on Dribbble
dribbble.com

Problem it solves:
Many students struggle to understand difficult subjects, prepare for tests, and stay organized with their homework.

Who would use it?

- Middle school students
- High school students
- College students

How AI helps users:
AI analyzes the student's study materials and creates personalized explanations, practice questions, and study plans based on what the student needs to learn.

Three main features:

1. AI Homework Helper: Students take a picture of a question and receive a simple explanation.
2. Smart Flashcards: AI automatically creates flashcards from notes or textbooks.
3. Personalized Study Planner: AI creates a study schedule based on upcoming tests and assignments.

Why people would find it useful:
Students could save time, understand difficult subjects more easily, and feel more confident when taking exams.

Option 2

2. EcoHero AI – Your Personal Environmental Assistant

Carbonly - Mobile App Design | Tracking Carbon Footprint by Vladislava Povelitsa for Artspire on Dribbble
dribbble.com

Problem it solves:
Many people want to protect the environment but don't know how their everyday actions affect the planet or how to reduce waste.

Who would use it?

- Students
- Families
- Teachers
- Environmentally conscious people

How AI helps users:
AI analyzes pictures of trash, identifies recyclable materials, and provides suggestions for making more environmentally friendly choices.

Three main features:

1. Smart Recycling Scanner: Users take a picture of an item, and AI helps identify whether it belongs in recycling, compost, or regular trash.
2. Eco-Friendly Challenges: AI suggests daily activities, such as using reusable water bottles or saving electricity.
3. Environmental Tracker: Users track their recycling habits and estimate how much waste they have reduced.

Why people would find it useful:
It makes protecting the environment easier and more enjoyable. It also teaches people how small everyday actions can make a positive difference.

Option 3

3. MindMate AI – Your Personal Wellness Companion

MindEase AI – Smart Mood Tracking & Guided Wellness by Jobayer Mahbub for Arobix Design on Dribbble
dribbble.com

Problem it solves:
Students and young adults sometimes feel overwhelmed by schoolwork, friendships, responsibilities, and everyday stress.

Who would use it?

- High school students
- College students
- Young adults
- People interested in personal wellness

How AI helps users:
AI provides supportive conversations, recommends relaxation activities, and helps users recognize patterns in their daily moods.

Three main features:

1. AI Wellness Chat: Users can talk about everyday frustrations and receive supportive suggestions.

2. Mood Tracker: Users record how they feel each day and view their mood patterns over time.
3. Relaxation Center: AI recommends breathing exercises, calming activities, and short meditation sessions.

Why people would find it useful:
It gives users an easy way to reflect on their feelings, practice healthy habits, and manage everyday stress. It would be a wellness tool, not a replacement for professional mental health support.

Additional Information:

Comparing the Three App Ideas

Category	StudySmart AI	EcoHero AI	MindMate AI
Main purpose	Education	Environment	Wellness
Target audience	Students	Everyone	Young adults
AI technology	Text analysis	Image recognition	Conversational AI
Difficulty	Medium	Medium	Medium
Main benefit	Better studying	Less waste	Better self-care

My Recommendation for Your School Project

Best overall choice
StudySmart AI – Your Personal Study Assistant

I recommend this idea for three reasons:

1. Relatable problem: Almost every student understands the challenges of homework, studying, and preparing for tests.
2. Useful AI technology: You can demonstrate how AI turns notes into flashcards, explains difficult questions, and creates quizzes.
3. Easy to demonstrate: You could build a simple prototype showing how a student uploads notes and receives an AI-generated study guide.

Final App Idea:

My Final App Idea: The Final app idea that I am going to choose is the AI study app. According to ChatGPT, it claims that a studying app has the most potential out of the other two options.

App Name: The name that I am thinking of for my app would be “Snap N’ Learn”. I chose this because you can type your information or take a picture of your question (if possible) and the app will give an answer at around the same time as a snap of a finger, pun intended.

Problem My App Solves: A problem that my app can solve could be the problem of clarification. To elaborate on this, assuming that you have a question that you can only answer briefly. You want a deeper understanding on this topic or question so you can use an app like "Snap N’ Learn” to turn a simple thought into a deeper understanding.

Who Will Use My App: This question sometimes has loopholes, but people who “will” use my app could be adults asking for clarification on a question in mind or a problem that they will run into. But really, middle school students, high school students, and college students are most likely going to use my app as an experiment or to answer a simple school question, unless they want a complex answer.

Why I Chose This Idea: Okay, so I chose this idea because since Artificial Intelligence is becoming more advanced, this is the perfect opportunity to take advantage of it. An example of using AI would be to answer questions in either simple or complex formats. Or, to be able to teach a piece of code to learn for itself, kind of.
